Excipients q.s..

INDICATIONS FOR SULFAMETHOXAZOLE AND TRIMETHOPRIM

Sulfamethoxazole is a potential sulfa drug with antibacterial properties, which is used in the treatment of many bacterial infections in dogs and cats. It is commonly used against the infections of the lungs, urinary tract, skin and gastrointestinal organs. Trimethoprim is found to be of use in treating conditions like Pneumonia, Enteritis, Otitis media, Prostatitis, Coccidiosis, Kennel cough, and Staphylococcal skin infections among others.

PRECAUTIONS

Never use this medication in animals that are allergic to sulfonamides or in those with known liver or kidney ailments or blood related disorders. It is not safe to use this drug in pregnant and lactating animals.

DOSAGE

Trimethoprim is a prescription drug and should never be used without consulting a licensed veterinarian. It is presented as tablets of 80/400mg and 160/800mg, and suspension of 40/200mg. The recommended daily dose in dogs and cats is 25 to 100 mg/kg given orally, (in two equal doses 12 hours apart) for 1-2 weeks. The medicine can also be given subcutaneously, intramuscularly or intravenously. Take care to complete the course unless specifically directed by the vet as chances of relapse is high.

SIDE EFFECTS

Some of the commonly reported side effects of Trimethoprim include loss of appetite, nausea, diarrhea, fever, anemia, allergic inflammations, hives, dry eyes and seizures.

What are Sulfamethoxazole and Trimethoprim Tablets (SMZ-TMP)?

Sulfamethoxazole and Trimethoprim (SMZ-TMP) Tablets are a combination antibiotic used to treat respiratory, urinary tract, skin, or gastrointestinal infections, and other conditions. Sulfamethoxazole and Trimethoprim (SMZ-TMP) Tablets Double Strength require a prescription from your veterinarian, and are sold per tablet.
